

Megan O. Lewis, MSN RN CPNP

Children's Hospital of Philadelphia

Personal Bio

Megan O. Lewis is a Pediatric Nurse Practitioner at the Children's Hospital of Philadelphia with over 10 years of practice experience in Allergy. She was graduated by the University of Virginia for both undergraduate and graduate degrees and completed a fellowship after graduation. In allergy, her role has expanded from clinical care and assisting research to leading the research team. Last year, the division was awarded a grant from the hospital to expand food allergy clinical care and research. Megan was promoted to manage the grant while maintaining clinical practice. Megan has been involved in professional organizations, including the AAAAI Allied Health Committee since 2017 and the National Association of Pediatric Nurse Practitioners. She has been invited to speak locally and nationally on topics of allergic diseases. She participates in clinical research and serves as a consultant for companies developing products for disease management. This year, Megan was recognized in the inaugural APP Professional Advancement Program as a Clinical Leader Master, the highest clinician level for NPs at CHOP.

Vision Statement

The field of Allergy and Immunology is rapidly changing with burgeoning new treatments on the horizon. This exciting time in the field requires clinicians to be resources within their practices and communities. Megan's vision for the committee is to increase awareness about the wealth of knowledge allied health members have to share both with families and our physician colleagues. Engagement with more allied health professionals is essential for a strong committee and Megan's hope is to increase membership within the community. Allied health professionals are often interacting with patients frequently and fielding concerns and questions. It is important for professional development that allied health members feel connected and supported by the AAAAI. Megan hopes to channel the dynamic range of knowledge and experience the group of NPs, PAs, RDs, RNs, and RTs has to enrich the larger community and educate.
